

Why?

Why should you choose AIBLAB?

- ✓ Verified Health Functional Food certified by the Ministry of Food and Drug Safety (MFDS), not just general food.
- ✓ Vitamin D3, which has a higher absorption rate than Vitamin D2.
- ✓ Fully filled potency: Vitamin D 2000IU per capsule.
- ✓ Zinc 2.55mg, essential for healthy immune function.
- ✓ Orange-flavored chewable, easy to take without water.

AIBLAB Vitamin D Intake Method

- Standard Adult Criteria: Recommended 6-month intensive intake dosage
= Vitamin D3 4000IU = 2 tablets (Can maintain with 1 tablet afterward)
- For those wanting intensive care based on health goals:
→ Take 2 tablets (4,000 IU) daily for about 3~6 months.

Afterward, switching to 1 tablet (2,000 IU) is recommended.

★★★★★ park****

Great for immunity during pregnancy, especially with the added Zinc. My condition feels much more stable, and the tasty orange chewable makes it easy to take every day.

★★★★★ sung****

I chose this for the specific D3 and K2 MK7 blend. Since switching, I feel lighter and more energetic. It's a certified health food I finally feel I can settle on.

★★★★★ lee****

This product feels 'properly made' compared to others. The premium combination of D3 and Menaquinone-7 is excellent, and the chewable format is convenient and tastes great.

Recommended for these people!

Pregnant women and women preparing for pregnancy who need Vitamin D supplementation.

Those who have started bone health management.

Those with low Vitamin D levels requiring management.

Those with little outdoor activity/little chance of sunlight exposure.

Optimal Intake of Vitamin D3 and Vitamin K2 (MK7)

AIBLAB Vitamin D3 & K2 Menaquinone-7 is not general food but a Health Functional Food recognized by the Ministry of Food and Drug Safety for bone health and blood formation (redistribution of calcium).

Vitamin D increases calcium absorption in the small intestine to increase and maintain blood calcium concentrations.

Vitamin K2 is needed for calcium to move from the blood to the bones.

Vitamin K2 MK-7 Mechanism of Action

Bone Health

Vitamin K2 activates (via Carboxylation) an enzyme called Osteocalcin, which helps blood calcium be well absorbed into the bones. It works to ensure calcium is smoothly absorbed into the bones, playing a crucial role in preventing Osteoporosis and improving bone health.

Cardiovascular Health

Vitamin K2 activates MGP (Matrix Gla Protein), a very important enzyme that regulates calcium metabolism in blood vessels. It prevents calcium from accumulating in blood vessels (Vascular calcification), thereby preventing arteriosclerosis and significantly reducing the incidence of cardiovascular diseases. It is the best vitamin of the 21st century.
